The Birmingham Illustrated Catalogue of Edge Tools

To their Friends and the Public, the Proprietors venture to affirm that it will be found the most novel and useful that has hitherto been published.

From the long period in which they have been engaged in the manufacture of heavy and light Edge Tools, together with Spades, Shovels, Forks, Matchets, &c., &c., &c., of all kinds, and from the intercourse they have maintained with Merchants who trade in all parts of the world, they have been enabled to select and arrange in order the Tools adapted to the various markets.

The introduction of a Boracic Flux, in the process of welding, has enabled the Manufacturers to employ the best Cast Steel, where steel of an inferior quality was previously used, and thereby a much superior tool is now produced, and one that will stand the most severe test. Edge Tools with cast steel faces, and these with solid steel edges, are proved by general experience to be very much superior in quality, and, in the end, cheaper than those with the steel inserted in the edge; and the Proprietors would recommend to their Friends the purchase of these Tools when a superior article is required (a cheaper and commoner article proving much dearer in the end).

The Proprietors have been established in their own name nearly a century. When first entering upon the business they acquired by purchase the trade and connection of two old-established firms, who had been noted as makers for many years previously. The make, quality, and finish of their Tools is fully equal to any made in America; and in their manufactory is employed the most approved modern labour-saving machinery, which enables the articles made to be uniform in shape. Their Illustrated Catalogue is the most complete published, and the Pattern Room contains the latest approved Patterns, used in every market in the world; and to this the attention of foreign buyers, when visiting England, is particularly directed. The demand for their make of tools is such that they have not a single foreign representative.

Every article is strictly guaranteed, each implement being minutely examined by practical and experienced men before being exported; very careful attention is paid to the hardening and tempering, it being useless to bestow great care in the make and finish unless attention is previously paid to those important matters.

The Cast Steel used is from noted Sheffield makers, who supply the large demands of the American Edge Tool Manufacturers.

The Trade-mark and Standard Labels are registered in England and Germany.

NOTICE.—The Birmingham Illustrated Catalogue of Edge Tools (of which J. Y. & Co. are the sole Proprietors) is protected from piracy of design, arrangement, &c., &c., and any infringement will be amenable to the law of Copyright.

The original catalogue belongs to Mike Rawlings
of Somerset in the UK

It was generously loaned to Bob Burgess, a member of
TATHS (The Tools and Trades History Society) to
photograph in order to create a PDF file copy for inclusion
in the International Tool Catalogue Library at archive.org

Due to difficulties in photographing some pages due to
the proximity of the illustrations to the spine, and
problems with laying the pages flat, some pages are
distorted. However it was felt that a poor copy of the
catalogue for study purposes is better than none.

The original catalogue appears to have been
professionally rebound at some time in its life, with a
new leather spine and corners.
